

VEGA

CONVERSION SOFTWARE

D1.4

- ✓ Do you use D1.4 engraving software?
- ✓ Do you order logos from outside sources?
- ✓ Do you use a digitizer to create logos?
- ✓ Do you use or want to use CorelDraw?

Please read this product news release:

FRANS TECHNOLOGY INC. designed and developed Vega Conversion Software to be the bridge between CorelDraw and D1.4 engraving software. In seconds, Vega can convert the HPGL format, which is created by CorelDraw, into the *.log format, which is recognized by D1.4.

With Vega, you can create logos in your shop by using the popular CorelDraw graphics application. You will no longer need to order logos from outside sources, saving you time and saving you money.

With Vega, you can expand your fonts from the few dozens in the original D1.4 library to the few hundreds available in CorelDraw. You can expand your logos library to include most of the CorelDraw published logos. You can also combine existing fonts and logos from CorelDraw with your own logos into a layout. A great variety of fonts and logos are now available for you and your customers.

The introductory price for our Vega Conversion Software is \$339.00. Vega is now available to ship. Please take this opportunity to order right now.
